About this document

This document enables election officials to verify the software files for the ClearDesign system.

A ClearVote® system can comprise the ClearAccess®, ClearAudit®, ClearCast®, ClearCount®, and ClearDesign® products. Jurisdictions are not required to purchase all products. You can ignore references to any ClearVote products that are not part of your voting system. Also ignore implementation options that are not relevant to your policies and procedures.

Scope of this document

This document contains the following chapters:

- [Verifying ClearDesign software](#)
- [Installed third-party software](#)

Intended audience

The document is for state and federal election officials and their voting system test laboratories as part of the Technical Data Package (TDP) required to certify the ClearVote system for use. This document is also used by Clear Ballot personnel who support election officials and staff.

Chapter 1. Verifying ClearDesign software

After installing your ClearDesign software, you need to verify that the SHA-256 hash values of the installed software match those of the certified version. This process ensures that the contents of the software have not been changed by a third-party or altered by malware.

To verify the installed software:

1. At a DesignStation computer, log in to the ClearDesign system.
2. Insert a USB drive into one of the computer's available USB ports.

Clear Ballot recommends the use of encrypted USB drives. See the *ClearVote Approved Parts List* for approved devices.
3. Click the drop-down menu that appears at the top right of the screen next to your user name and select **About this software**. The About screen opens with the ClearDesign Product Files tab selected.
4. Click the **Copy** button to copy the contents of the ClearDesign Product Files tab.
5. From the Windows task bar, type *notepad* and select **Notepad** from the search results.
6. Paste the copied information into the Notepad window and save the file as a TXT file to the USB drive.
7. Close the About page and log out of the DesignStation computer.
8. Remove the USB drive from the DesignStation computer and insert it into another computer running Microsoft Windows.

Another computer is necessary because the ClearDesign hardening procedures prevent opening and viewing the file on the DesignStation computer.
9. Use a text or spreadsheet program, such as Notepad or Excel, to open and view the file.
10. Compare the hash values in the saved file to the hash values listed in the following table.
 - If the hash values match, the software is unmodified and matches the certified version.
 - If the hash values do not match, the software on the server does not match the certified version. The software has been modified, improperly installed, or is nonmatching for some other reason.
11. If any mismatch occurs, do one of the following:
 - Follow the jurisdictional procedures to resolve the discrepancy.
 - Contact Clear Ballot Technical Support for assistance.

1.1 Installed ClearDesign product files

The following table lists the file specification, timestamp and SHA-256 hash value for each of the Clear Ballot-authored files installed on the DesignServer.
